

Eastbrook Primary School Mathematics Curriculum

Intent: A Character and Academics approach

At Eastbrook Primary School we aim to teach children how to make sense of the world around them by developing their ability to calculate, reason and solve problems. Our mathematics curriculum assumes that all pupils will use their mathematical knowledge throughout their lives, and in a wide range of contexts: in life-long learning, in training, or in employment; whilst managing a weekly or annual budget, when arranging loans, and in buying and selling. As a result, the curriculum has been designed to be fit for that purpose.

Our aims in the teaching of mathematics are:

- to promote enjoyment of learning through practical activity, exploration and discussion;
- to develop confidence and competence with numbers and the number system;
- to develop the ability to solve problems through decision-making and reasoning in a range of contexts;
- to develop a practical understanding of the ways in which information is gathered and presented; to explore features of shape and space, and developing measuring skills in a range of contexts;
- to help children understand the importance of mathematics in everyday life.
- to become fluent in the fundamentals of mathematics, including through varied and frequent mathematical problems.
- to reason mathematically by following a line of enquiry, conjecturing relationships and making generalisations, and by developing an argument, justification or proof using precise mathematical language.

End Point (Key Stage 4)

Mathematics at Eastbrook School develops knowledge and skills sequenced in a clearly delineated structure within the wider school 'Character and Academics' approach to curriculum. Throughout their developmental journey, children gain specific knowledge, practice skills with ever increasing complexity and demonstrate virtues that enable them to be ready for further study or work. Our curriculum supports this journey through its' spiral design, where clearly sequenced units of knowledge, skill and virtue are regularly revisited, building on previous learning; this is amongst a few initiatives in the wider 'retention strategy' for the subject. Describe-explain-convince-justify-prove', 'SSDD' and 'variation-theory' are amongst some new initiatives used in mathematics lessons to ensure differentiation, inclusion and challenge are always present. In this way, children develop fluency in mathematics and improve their reasoning skills as well as being able to solve problems.

Way Points

The waypoints for the end of the reception year are laid out in Development Matters. The waypoints for the end of KS1 and the end of KS2 are laid out in the national Curriculum programmes of study.

By the end of Early Years

By the end of the Early Years Foundation Stage children will have been taught the six key areas of early mathematics learning which collectively provide a platform for everything children will encounter as they progress through their maths learning at primary school, and beyond:

- Cardinality and Counting
- Comparison
- Composition
- Pattern
- Shape and Space
- Measures

By the end of Key Stage 1

Children can add and subtract with two-digit and one-digit numbers. They know the multiplication and division facts for the 2, 5 and 10 times-tables. When working with fractions they can find $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{2}$ and $\frac{3}{4}$ of a shape or a quantity of objects. They are familiar with measures, including weight, capacity and length, and can tell the time to five minutes. They know the properties of 2D and 3D shapes, as well as a range of data-handling methods such as bar charts and pictograms. They know the number bonds to 20 and are precise in using and understanding place value. Children will demonstrate a breadth of knowledge and will use their understanding of key maths concepts to solve a range of challenging maths problems.

By the end of Key Stage 2

Pupils demonstrate broad and deep conceptual knowledge by making links between concepts, discussing their work using precise mathematical vocabulary, and by solving challenging mathematical problems. They use their understanding of place value, including large numbers and decimals, to solve a range of number problems. They calculate mentally, using efficient strategies such as manipulating expressions using commutative and distributive properties to simplify the calculation. Pupils use formal methods to solve multistep problems.

They can recognise the relationship between fractions, decimals and percentages and can express them as equivalent quantities. Pupils perform a range of calculations using fractions, decimals or percentages. They substitute values into a simple formula to solve problems.

The pupil can calculate with measures. They use mathematical reasoning to find missing angles. Pupils can use simple algebra, can calculate missing angles in a range of shapes, and can interpret pie charts using percentages.

Sequencing

Mathematics is planned and sequenced so that new mathematical knowledge, skills and virtues build on what has been taught before and lead naturally towards our defined **waypoints** and **endpoints**. We recognise the importance of creating a joined-up, progressive mathematical curriculum which builds on what has gone before and prepares pupils for what comes next. As an all-through school, we are particularly well placed to ensure a well-sequenced learning journey – the Year Seven curriculum builds upon the primary curriculum. To this end we ensure that there is consistency in the language of learning and the language for learning.

Early Years Foundation Stage – Reception Year: Our Early Years Foundation Stage curriculum introduces children to a wide range of engaging and exciting concepts which enable them to develop their personalities, talents and abilities. It frames a range of structured and unstructured experiences planned with knowledge of the strengths and needs of each child. Curriculum adaptation during this stage is individualised and happens moment-to-moment. This curriculum ensures children build the character and academic, skills and knowledge essential for successful learning in Key Stages 1 and 2.

Mathematics has is one of seven specific areas of learning in the revised Early Years Foundation Stage statutory framework. We ensure that children hear maths talk and have lots of opportunities to explore in a mathematical way from the moment they enter our Reception class. Our mathematics practice is informed by ‘Development Matters’, the non-statutory guidance material that supports practitioners in implementing the statutory requirements of the EYFS (2012).

We plan for children to:

- play with and explore key mathematical concepts.
- actively learn to apply key mathematical concepts.
- create and think critically. We encourage children to have and to develop their own mathematical ideas, and to make links between mathematical ideas, and to develop their own mathematical strategies for doing things.

We plan for children to develop mathematical concepts through playing and exploring. We also ensure that as children learn, we provide experiences to help them develop their own ideas. Children learn mathematical concepts in the Foundation stage through games, routines, classroom and lunchtime talk, and chanting. Our Nursery children actively explore and experience shape, space and position as part of everyday play. We ensure that children hear rich mathematical talk as they play.

Key Stage 1 and Key Stage 2 – Year 1 to Year 6: Our KS1 and KS2 curriculum ensures children have the essential learning skills of literacy and numeracy; are creative, resourceful and able to identify and solve problems; have enquiring minds and think for themselves to process information, reason, question and evaluate; communicate well in a range of ways; understand how they learn and learn from their mistakes; are able to learn independently and with others; know about big ideas and events that shape our world; enjoy learning and are motivated to achieve the best they can, now and in the future. It is a curriculum that ensures pupils leave primary school having mastered demanding standards of reading writing and maths – meaning they are ready to deal with the challenges of secondary school and equipped to thrive.

We use the ‘Inspire Maths’ scheme, which has a proven track-record of success in Singapore and England. Inspire Maths develops firm mathematical foundations and builds on concepts and skills within a spiral curriculum. We plan for a systematic development of skills and concepts within each unit.

Appendix 1 is the Inspire Maths overview of units. Appendix 2 is the document: Progression of Maths Concepts from Year One to Year Six. This shows how key maths concepts are developed as pupil’s progress through the school. Appendices 3, 4, 5 and 6 are the Inspire Maths Calculation Progression Charts. These documents show how the progression of calculation in addition and subtraction and multiplication and division, from Year One to Year Six.

Adaptation

Our curriculum reflects the school’s local context by addressing typical gaps in pupils’ knowledge and skills. The most significant factors impacting on pupils’ knowledge and skills with regard to our local context are:

- The number of pupils in school with English as an Additional Language (EAL).
- The number of pupils in school with Speech, Language and Communication needs (SLC).
- The number of pupils in school with Social Emotional and Mental Health needs (SEMH).
- The high level of economic deprivation amongst pupils.
- The variation in cultural experience amongst pupils.
- Inconsistent teaching of maths in the past – leading to gaps in pupils’ knowledge.

Adapting our curriculum to address these typical gaps involves considered selection of materials to interpret the National Curriculum - for example our adoption of the International Primary Curriculum in Key Stages 1 and 2 to highlight the natural international mindedness of our community and to value and promote it – and considered selection of experiences to supplement the National Curriculum – for example our creation of a list of 100 things to do before 18 $\frac{3}{4}$ and the weaving of these through our curriculum to address the lack of cultural capital afforded our economically deprived pupils.

When the Inspire Maths curriculum was introduced in September 2019 Years 2 to 6 revised the previous year’s Inspire maths curriculum, for the first half term. This ensured that knowledge gaps were addressed. Teachers adapt the Inspire Maths curriculum to address whole-class gaps in knowledge.

Curriculum and pedagogic adaptation

Curriculum adaptation at pupil level is indistinguishable from pedagogic adaptation and is a matter of implementation rather than intent. It is an ongoing dynamic process that modifies and adapts the prescribed programmes of study to meet the learning requirements of each pupil. It enables the teachers to teach learners of all abilities and ensures that every pupil is challenged. Maths books are monitored regularly to ensure that the school’s marking and feedback policy is being followed. Book monitoring ensures that marking is regular and has an impact on pupils’ progress.

Weaving character virtues throughout mathematics teaching

The core **character virtues** - creativity, curiosity, perseverance, and teamwork – are weaved throughout the mathematics curriculum. Examples of this are shown in the table below.

Character virtue	Example of its application
Curiosity	<ul style="list-style-type: none"> How is the Base 10 number system linked to our fingers? How can a number represent an object? How is the Base 2 number system linked to electricity? How can our number system record an infinite number of numbers using just ten digits? How did people record numbers before the invention of the zero? Why is the zero so important in our Base 10 number system? What is the relationship between fractions, decimals and percentages? What is a concept? How can I show my understanding of a maths concept? What is infinity? Can a number be infinitely big? Can a number be infinitely small? What are negative numbers? How are negative numbers related t positive numbers? What mathematical patterns can I spot? What is the relationship between 2d and 3d shapes? How and why is data presented in different ways? What makes a calculation efficient? What makes a solution to a problem elegant? Why do we have standard metric units of length, mass and volume?
Teamwork	<ul style="list-style-type: none"> How is time related to the movement of the Earth? Pupils work in a tem to solve mathematical problems. They listen to each other explain methods. Pupils work in a team to analyse a question and suggest what mathematical concepts are involved. Pupils ask their peers questions.

Perseverance	Pupils stick with a problem. When they find a mathematical concept hard they say. "I don't get it yet." They appreciate the importance of perseverance in learning a concept.
Kindness	Pupils support their peers and help them by sharing their methods. They show kindness when a pupil finds a concept hard to understand. They ask questions to support their peers and see maths as a joint learning process of discovery.
Gratitude	Pupils show gratitude when their peers help them with a problem. They are grateful and polite when the teacher offers support.

Transferable knowledge

Mathematics knowledge is used across the curriculum. Some examples are summarised in the table below.

Maths knowledge	Application of knowledge
Number and place value	Science: measurement - converting units of measurement. Geography:
Data handling	Science: Recording data using tables, graphs and charts. Science: Analysing data. Geography: Recording data using tables, graphs and charts. Geography: Fieldwork experience. Geography: Climate analysis.
Reasoning	Science: Reasoning about scientific results and drawing appropriate conclusions. Geography:
Geometry	Geography: Coordinates and grid reference.
Measuring	Science: Science experiments. Geography: Geography fieldwork.

Appendices

- Appendix 1 Inspire Maths overview of units.**
- Appendix 2 Progression of Maths Concepts from Year One to Year Six.**
- Appendix 3 Calculation Progression Chart: Addition and Subtraction**
- Appendix 4 Calculation Progression Chart: Multiplication and Division**
- Appendix 5 Calculation Progression Chart: Fractions, Percentages and Decimals**
- Appendix 6 Maths thinking skills and problem-solving heuristics**

Appendix 1

Inspire Maths Overview of Units

Unit	Inspire Maths 1	Inspire Maths 2	Inspire Maths 3	Inspire Maths 4	Inspire Maths 5	Inspire Maths 6
1	Numbers to 10	Numbers to 1000	Numbers to 10 000	Whole Numbers (1)	Whole Numbers (1)	Algebra
2	Number Bonds	Addition and Subtraction within 1000	Addition of Numbers within 10 000	Whole Numbers (2)	Whole Numbers (2)	Angles in Shapes and Diagrams
3	Addition within 10	Using Models: Addition and Subtraction	Subtraction of numbers within 10 000	Whole Numbers (3)	Fractions (1)	Nets
4	Subtraction within 10	Multiplication and Division	Solving Word Problems 1: Addition and Subtraction	Tables and Line Graphs	Fractions (2)	Fractions
5	Shapes and Patterns	Multiplying by 2 and 3	Multiplying by 6, 7, 8 and 9	Fractions	Area of a Triangle	Ratio
6	Ordinal numbers	Multiplying by 4, 5 and 10	Multiplication	Angles	Ratio	Percentage
7	Numbers to 20	Using Models: Multiplication and Division	Division	Perpendicular and Parallel Lines	Decimals	Speed
8	Addition and Subtraction within 20	Length	Solving Word Problems 2: Multiplication and Division	Squares and Rectangles	Measurements	Circles
9	Length	Mass	Mental Calculations	Decimals (1)	Mean (average)	Pie Charts
10	Mass	Mental Calculations	Money	Decimals (2)	Percentage	Area and Perimeter
11	Picture Graphs	Money	Length, Mass and Volume	Time	Angles	Volume of Solids and Liquids
12	Numbers to 40	Fractions	Solving Word Problems: Length, Mass and Volume	Area and Perimeter	Properties of Triangles and 4-sided Shapes	
13	Mental Calculations	Time	Bar Graphs	Symmetry	Geometrical Construction	
14	Multiplication	Volume	Fractions	Tessellations	Volume of Cubes and Cuboids	
15	Division	Graphs	Time			
16	Time	Lines and Surfaces	Angles			
17	Numbers to 100	Shapes and Patterns	Perpendicular and Parallel Lines			
18	Money (1)		Area and Perimeter			
19	Money (2)

NUMBERS

YEAR ONE

Numbers to 10	
Counting to 10	<ul style="list-style-type: none"> Understand numbers from 0 to 10
Compare	<ul style="list-style-type: none"> Two sets of objects can be compared using the method of one-to-one correspondence The number of objects can be the same as, smaller than or greater than another set of objects
Order and pattern	<ul style="list-style-type: none"> A sequence of objects and numbers can form a pattern
Numbers to 20	
Counting to 20	<ul style="list-style-type: none"> Use one-to-one correspondence in counting
Place value	<ul style="list-style-type: none"> Numbers to 20 can be represented as tens and ones in a place value chart
Compare	<ul style="list-style-type: none"> Numbers to 20 can be compared using the terms 'greater than' and 'smaller than' as well as by arranging in ascending or descending order
Order and pattern	<ul style="list-style-type: none"> Numbers can be arranged in order and made into a pattern
Numbers to 40	
Counting to 40	<ul style="list-style-type: none"> Using one-to-one correspondence in counting 1 ten equals ten ones
Place value	<ul style="list-style-type: none"> Numbers to 40 can be represented as tens and ones in a place value chart
Comparing, order and pattern	<ul style="list-style-type: none"> Numbers to 40 can be compared using the terms 'greater than' / 'smaller than' and 'greatest' / 'smallest' as well as arranged in ascending or descending order
Simple addition	<ul style="list-style-type: none"> 'Add on' and 'part-whole' concepts are used in adding numbers
More addition	<ul style="list-style-type: none"> 'Add on' and 'part-whole' concepts are used in adding numbers Regrouping concept can be applied in addition
Simple subtraction	<ul style="list-style-type: none"> The 'taking away' concept is used in subtraction
More subtraction	
Adding three numbers	<ul style="list-style-type: none"> 'Add on' and 'making ten' concepts are used in adding three numbers The regrouping concept is also applied
Solving word problems	<ul style="list-style-type: none"> The 'part-whole', 'taking away', 'adding on' and 'comparing' concepts are used to solve word problems involving addition and subtraction
Numbers to 100	
Counting	<ul style="list-style-type: none"> Using one-to-one correspondence in counting 1 ten is the same as 10 ones 10 tens is 100
Place value	<ul style="list-style-type: none"> Numbers to 100 can be represented as tens and ones in a place value chart

Comparing, order and pattern	<ul style="list-style-type: none"> Numbers to 100 can be compared using the terms 'greater than' and 'smaller than' Numbers to 100 can be arranged in ascending or descending order
Simple addition	<ul style="list-style-type: none"> The 'adding on' and 'part-whole' concepts are used in adding numbers
More addition	<ul style="list-style-type: none"> The 'adding on' and 'part-whole' concepts are used in adding numbers The regrouping concept is applied in addition
Simple subtraction	<ul style="list-style-type: none"> The 'taking away' concept is used in subtraction
More subtraction	
Mental calculations	
Mental addition	<ul style="list-style-type: none"> A 2-digit number can be conceptualised as tens and ones Adding is conceptualised as adding or putting parts together

Ordinal numbers	
Knowing ordinal numbers	<ul style="list-style-type: none"> Ordinal numbers are for describing the position of something
Naming left and right positions	<ul style="list-style-type: none"> Positions from the left and right can be named using ordinal numbers

YEAR TWO

Numbers to 1000	
Counting	<ul style="list-style-type: none"> Counting numbers up to 1000 by using concrete representations Strategies for counting in ones, tens and hundreds
Place value	<ul style="list-style-type: none"> Each digit of a number has its own value
Comparing numbers within 1000	<ul style="list-style-type: none"> Identify the place and value of the digits of corresponding numbers and then compare
Order and pattern	<ul style="list-style-type: none"> Numbers are said to form a pattern when they are arranged in a systematic order. To find the next number in a pattern, we add or subtract a certain fixed number
Mental Calculations	
Mental addition	<ul style="list-style-type: none"> Using number bonds in mental addition

YEAR THREE

Numbers to 10 000	
Counting	<ul style="list-style-type: none"> Counting numbers up to 10 000 by using concrete representations and strategies of ones, tens, hundreds and thousands
Place value	<ul style="list-style-type: none"> The digits of a number have their own values in terms of ones, tens, hundreds and thousands
Comparing, order and pattern	<ul style="list-style-type: none"> Numbers up to 10 000 can be compared and arranged in ascending or descending order
9 Mental Calculations	

Mental addition	<ul style="list-style-type: none"> Applying number bonds to assist mental calculations
More mental addition	<ul style="list-style-type: none"> Relating a number that is close to 100 to a number bond and applying the number bond to do mental addition

YEAR FOUR

Whole Numbers (1)	
Numbers to 100 000	<ul style="list-style-type: none"> Place value of ten thousands, thousands, hundreds, tens and ones and counting numbers up to 100 000
Comparing numbers with 100 000	<ul style="list-style-type: none"> Numbers up to 100 000 are compared and arranged in ascending or descending order
Whole Numbers (2)	
Rounding numbers to the nearest ten	<ul style="list-style-type: none"> The number line is used as a visual aid to help pupils round numbers
Rounding numbers to the nearest hundred	
Estimation	<ul style="list-style-type: none"> Estimation is based on rounding numbers and it provides a tool for checking answers
Factors	<ul style="list-style-type: none"> Factors are whole numbers. When a given number is divided by its factor, it does not leave any remainder The smallest factor of a number is 1 and the greatest factor is the number itself
Multiples	<ul style="list-style-type: none"> Multiples of a 1-digit whole number are found by multiplying the whole number by any other whole number The concept of factors and multiples are related: 2 is a factor of 8 and 8 is a multiple of 2
Decimals (2)	
Addition	<p>Addition of decimals can be interpreted as:</p> <ul style="list-style-type: none"> combining two or more quantities into one the enlargement of a quantity, i.e. increasing the amount in the quantity comparison of a quantity with another, i.e. one quantity has a certain amount more than the other

YEAR FIVE

Whole Numbers (1)	
Numbers to 10 million	<ul style="list-style-type: none"> The next place after the ten thousands place is the hundred thousands place 10 ten thousands = 1 hundred thousand
Place and value	<ul style="list-style-type: none"> The actual value of a digit in a number is equal to the digit multiplied by the place value. E.g. the value of the digit 5 in the number 4 657 809 is 5 ten thousands, i.e. $5 \times 10\,000 = 50\,000$ The value of a number is the sum of the values of each digit in the number
Comparing numbers within 10 million	<ul style="list-style-type: none"> In a number, e.g. 1999, the value of the first digit (1000) is always greater than the sum of the values of the remaining digits (999)
Rounding to the nearest thousand and estimating	<ul style="list-style-type: none"> There are 10 hundreds between two consecutive thousands

Whole Numbers (2)	
Using a calculator	<ul style="list-style-type: none"> Understanding the concepts of place value and the four operations
Multiplying by tens, hundreds or thousands	<p>In the base ten number system:</p> <ul style="list-style-type: none"> Ones $\times 10 =$ tens, Tens $\times 10 =$ hundreds, Hundreds $\times 10 =$ thousands Ones $\times 100 =$ hundreds, Tens $\times 100 =$ thousands, Hundreds $\times 100 =$ ten thousands Ones $\times 1000 =$ thousands, Tens $\times 1000 =$ ten thousands, Hundreds $\times 1000 =$ hundred thousands
Dividing by tens, hundreds or thousands	<p>In the base ten number system:</p> <ul style="list-style-type: none"> Thousands $\div 10 =$ hundreds, Hundreds $\div 10 =$ tens, Tens $\div 10 =$ ones, Ones $\div 10 =$ tenths Ten thousands $\div 100 =$ hundreds, Thousands $\div 100 =$ tens, Hundreds $\div 100 =$ ones, Tens $\div 100 =$ tenths, Ones $\div 100 =$ hundredths Hundred thousands $\div 1000 =$ hundreds, Ten thousands $\div 1000 =$ tens, Thousands $\div 1000 =$ ones, Hundreds $\div 1000 =$ tenths, Tens $\div 1000 =$ hundredths, Ones $\div 1000 =$ thousandths
Order of operations	<ul style="list-style-type: none"> In number sentences with only addition and subtraction or only multiplication and division, the order of operations is from left to right In number sentences with multiplication and/or division together with addition and/or subtraction, the order of operations is from left to right with multiplication and/or division carried out first In number sentences with brackets, the order of operations is from left to right with the operations in the brackets carried out first
Word problems (1)	<ul style="list-style-type: none"> Application of concepts and skills of the four operations to solving word problems
Word problems (2)	<ul style="list-style-type: none"> Application of concepts and skills of the four operations and various strategies to solving word problems

Fractions (1)	
Adding unlike fractions	<ul style="list-style-type: none"> Fractions are equivalent when they show the same parts of the whole Fractions can be added when they are expressed as like fractions
Adding mixed numbers	<ul style="list-style-type: none"> A mixed number comprises a whole number and a proper fraction Mixed numbers can be added like adding proper and improper fractions

YEAR SIX

Algebra	
Using letters as numbers	<ul style="list-style-type: none"> Letters in algebraic expressions represent numbers A letter can represent a specific unknown number or any number in general
Simplifying algebraic expressions	<ul style="list-style-type: none"> The sum $a + a + a + \dots + a$ (n terms) $= n \times a = na$ The sum $ma + na = (m + n) \times a = (m + n)a$ The difference $ma - na = (m - n) \times a = (m - n)a$
Word problems	<ul style="list-style-type: none"> The process of problem solving in mathematics involves the application of concepts and strategies

DECIMALS

YEAR FOUR

Decimals (1)	
Understanding tenths	<ul style="list-style-type: none"> The first decimal place represents tenths 10 tenths = 1 one
Understanding hundredths	<ul style="list-style-type: none"> The second decimal place represents hundredths 10 hundredths = 1 tenth
Understanding thousandths	<ul style="list-style-type: none"> The third decimal place represents thousandths 10 thousandths = 1 hundredth
Comparing decimals	<ul style="list-style-type: none"> Decimals form part of the base-ten system of numeration
Rounding decimals	<ul style="list-style-type: none"> Between two consecutive whole numbers, there are 10 tenths Between two consecutive tenths, there are 10 hundredths Between two consecutive hundredths, there are 10 thousandths
Fractions and decimals	<ul style="list-style-type: none"> Decimals up to 3 places are fractions with denominators 10, 100, 1000
Decimals (2)	
Addition	<p>Addition of decimals can be interpreted as:</p> <ul style="list-style-type: none"> combining two or more quantities into one the enlargement of a quantity, i.e. increasing the amount in the quantity comparison of a quantity with another, i.e. one quantity has a certain amount more than the other
Subtraction	<p>Subtraction of decimals can be interpreted as:</p> <ul style="list-style-type: none"> taking away part of a quantity finding the missing part of a quantity given the whole and the other part comparison, i.e. the difference between two quantities complementary addition, i.e. how much must be added to a quantity to give another
Word problems	<ul style="list-style-type: none"> Application of the concepts of addition and subtraction of decimals to solving word problems
Multiplication	<p>Multiplication of a decimal by a whole number can be interpreted as:</p> <ul style="list-style-type: none"> repeated addition of the decimal comparison of one quantity with another, i.e. one quantity is n times as much as the other
Division	<p>Division of a decimal by a whole number can be interpreted as:</p> <ul style="list-style-type: none"> sharing equally, i.e. dividing the decimal into a number of equal groups. The number of groups is determined by the divisor grouping equally, i.e. dividing the set into groups of equal size. The size of each group is determined by the divisor
Estimation of decimals	<ul style="list-style-type: none"> Application of rounding concepts and mental calculation strategies
Word problems	<ul style="list-style-type: none"> Application of the concepts of multiplication and division of a decimal by a whole number to solving word problems

YEAR FIVE

Decimals	
Converting decimals to fractions	<ul style="list-style-type: none">• Decimals are an extension of fractions• Decimals can be converted to fractions, and vice versa
Multiplying by tens, hundreds and thousands	<ul style="list-style-type: none">• When a number is multiplied by 10, 100 or 1000, each digit in the number moves 1, 2 or 3 places respectively to the left in the place value chart• When a number is multiplied by 10, 100 or 1000, the decimal place shifts 1, 2 or 3 places respectively to the right
Dividing by tens, hundreds and thousands	<ul style="list-style-type: none">• When a number is divided by 10, 100 or 1000, each digit in the number moves 1, 2 or 3 places respectively to the right in the place value chart• When a number is divided by 10, 100 or 1000, the decimal place shifts 1, 2 or 3 places respectively to the left• Dividing by 10 is the same as multiplying by $\frac{1}{10}$
Using a calculator	<ul style="list-style-type: none">• Understanding the concepts of place value and the four arithmetical operations
Word problems	<ul style="list-style-type: none">• Application of concepts and skills of the four operations to solving word problems

ADDITION

YEAR ONE

Addition within 10	
Ways to add	<ul style="list-style-type: none"> • Adding is associated with the 'part-whole' and 'adding-on' concepts
Making up addition stories	
Solving word problems	<ul style="list-style-type: none"> • Applying the 'part-whole' and 'adding on' concepts in addition
Addition within 20	
Ways to add	<ul style="list-style-type: none"> • Two 1-digit numbers can be added by using the 'make 10' strategy and the 'regrouping into tens and ones' strategy • 2-digit numbers can be regrouped into tens and ones
Solving word problems	<ul style="list-style-type: none"> • Applying the 'part-whole', 'adding on' concept in addition
Adding Money (2)	
Adding in pence	<ul style="list-style-type: none"> • Addition concept in numbers is used in addition of money
Adding in pounds	
Solving word problems	<ul style="list-style-type: none"> • The 'part-whole', 'adding on', and 'comparing' concepts in addition and subtraction are used in solving word problems

YEAR TWO

2 Addition within 1000	
Simple addition within 1000	<ul style="list-style-type: none"> • The 'adding on' concept is related to calculation in addition • The digit at each place has its own value
Addition with regrouping the ones	<ul style="list-style-type: none"> • The regrouping concept in addition
Addition with regrouping the tens	
Addition with regrouping the tens and ones	
3 Using Models: Addition	
Simple word problems (1)	<ul style="list-style-type: none"> • Using models to find the whole from two or more parts • Using models to find a part of a whole
Simple word problems (3)	<ul style="list-style-type: none"> • The 'comparing' concept can be represented by models

YEAR THREE

2 Addition of Numbers within 10 000	
The meaning of sum	<ul style="list-style-type: none"> • The meaning of 'sum' is to add

Simple addition within 10 000	<ul style="list-style-type: none"> • Addition within 10 000 without regrouping
Addition with regrouping in hundreds	<ul style="list-style-type: none"> • Addition with regrouping in hundreds
Addition with regrouping in ones, tens and hundreds	<ul style="list-style-type: none"> • Addition with regrouping in ones, tens and hundreds

YEAR FOUR

Decimals (2)	
Addition	<p>Addition of decimals can be interpreted as:</p> <ul style="list-style-type: none"> • combining two or more quantities into one • the enlargement of a quantity, i.e. increasing the amount in the quantity • comparison of a quantity with another, i.e. one quantity has a certain amount more than the other

YEAR FIVE

Fractions (1)	
Adding unlike fractions	<ul style="list-style-type: none"> • Fractions are equivalent when they show the same parts of the whole • Fractions can be added when they are expressed as like fractions
Adding mixed numbers	<ul style="list-style-type: none"> • A mixed number comprises a whole number and a proper fraction • Mixed numbers can be added like adding proper and improper fractions

YEAR SIX

4 Fractions	
Adding fractions	<ul style="list-style-type: none"> • Addition of fractions or mixed numbers can be interpreted in the same way as addition of whole numbers

SUBTRACTION

YEAR ONE

4 Subtraction within 10	
Ways to subtract	<ul style="list-style-type: none"> Subtracting is associated with the 'part-whole' and 'taking away' concepts
Making up subtraction stories	
Solving word problems	<ul style="list-style-type: none"> Applying the 'part-whole' and 'taking away' concepts in subtraction
Making a family of number sentences	<ul style="list-style-type: none"> A family of number sentences can be written from a set of three related numbers
Subtraction within 20	
Ways to subtract	<ul style="list-style-type: none"> 2-digit numbers can be regrouped into tens and ones
Solving word problems	<ul style="list-style-type: none"> Applying the 'part-whole', 'taking away' concepts in subtraction
Mental calculations	
Mental subtraction	<ul style="list-style-type: none"> A 2-digit number can be conceptualised as tens and ones Subtracting is conceptualised as taking away from a whole
19 Money (2)	
Subtracting in pence	<ul style="list-style-type: none"> Subtraction concept in numbers IS used in subtraction of money
Subtracting in pounds	
Solving word problems	<ul style="list-style-type: none"> The 'part-whole', 'taking away' and 'comparing' concepts in subtraction are used in solving word problems

YEAR TWO

Subtraction within 1000	
Simple subtraction within 1000	<ul style="list-style-type: none"> The 'taking away' concept is related to calculation in subtraction The digit at each place has its own value
Subtraction with regrouping the tens and ones	<ul style="list-style-type: none"> The regrouping concept in subtraction
Subtraction with regrouping the hundreds and tens	<ul style="list-style-type: none"> Regrouping in hundreds and tens in subtraction
Subtraction with regrouping the hundreds, tens and ones	<ul style="list-style-type: none"> Regrouping in hundreds, tens and ones in subtraction
Subtraction with numbers that have zeros	<ul style="list-style-type: none"> Regrouping involving zeros in hundreds to tens and tens to ones
Using Models: Subtraction	

Simple word problems (1)	<ul style="list-style-type: none"> Using models to find the whole from two or more parts Using models to find a part of a whole
Simple word problems (2)	<ul style="list-style-type: none"> Using models to make a whole by joining one or more parts to another Using models to show when one or more sets are taken away
Simple word problems (3)	<ul style="list-style-type: none"> The 'comparing' concept can be represented by models

YEAR THREE

Subtraction of Numbers within 10 000	
The meaning of difference	<ul style="list-style-type: none"> The regrouping concept in subtraction
Simple subtraction within 10 000	<ul style="list-style-type: none"> Subtraction without regrouping
Subtraction with regrouping in hundreds and thousands	<ul style="list-style-type: none"> Regrouping from thousands to hundreds
Subtraction with regrouping in ones, tens, hundreds and thousands	<ul style="list-style-type: none"> Subtraction with regrouping in ones, tens, hundreds and thousands
Subtraction with numbers that have zeros	<ul style="list-style-type: none"> Regrouping from thousands to hundreds, tens and ones in subtraction
Solving Word Problems Subtraction	
Word problems	<ul style="list-style-type: none"> Translating subtraction concepts into models for solving two-step word problems
Mental Calculations	
Mental subtraction	<ul style="list-style-type: none"> Applying number bonds in subtraction
Money	
Subtraction	<ul style="list-style-type: none"> Subtracting money is similar to subtracting whole numbers
Word problems	<ul style="list-style-type: none"> Concepts in subtracting whole numbers are applied in problems involving money
Solving Word Problems: Length, Mass and Volume	
One-step word problems	<ul style="list-style-type: none"> Concepts subtraction in whole numbers are applied to solve word problems on length, mass and volume
Two-step word problems	<ul style="list-style-type: none"> Concepts in the four operations are applied to solve two-step word problems
Fractions	
Subtracting fractions	<ul style="list-style-type: none"> Two fractions are related when the denominator of one fraction is a multiple of the denominator of the other fraction When subtracting related fractions, the related fractions are changed to like fractions first
15 Time	
Subtraction	<ul style="list-style-type: none"> Hours and minutes can be subtracted like whole numbers Regrouping concepts (60 mins = 1 h) are applied to whole numbers

YEAR FOUR

10 Decimals (2)	
Subtraction	Subtraction of decimals can be interpreted as: <ul style="list-style-type: none"> • taking away part of a quantity • finding the missing part of a quantity given the whole and the other part • comparison, i.e. the difference between two quantities • complementary addition, i.e. how much must be added to a quantity to give another
Word problems	<ul style="list-style-type: none"> • Application of the concepts of addition and subtraction of decimals to solving word problems

YEAR FIVE

Order of operations	<ul style="list-style-type: none"> • In number sentences with only addition and subtraction or only multiplication and division, the order of operations is from left to right • In number sentences with multiplication and/or division together with addition and/or subtraction, the order of operations is from left to right with multiplication and/or division carried out first • In number sentences with brackets, the order of operations is from left to right with the operations in the brackets carried out first
Word problems	<ul style="list-style-type: none"> • Application of concepts and skills of the four operations to solving word problems
Word problems	<ul style="list-style-type: none"> • Application of concepts and skills of the four operations and various strategies to solving word problems
Fractions (1)	
Subtracting unlike fractions	<ul style="list-style-type: none"> • Two fractions can be subtracted if they come from the same whole or from identical wholes
Subtracting mixed numbers	<ul style="list-style-type: none"> • A mixed number comprises a whole number and a proper fraction • Mixed numbers can be subtracted like subtracting proper and improper fractions
7Decimals	
Using a calculator	<ul style="list-style-type: none"> • Understanding the concepts of place value and the four arithmetical operations
Word problems	<ul style="list-style-type: none"> • Application of concepts and skills of the four operations to solving word problems

YEAR SIX

Fractions	
Four operations with fractions	<ul style="list-style-type: none"> • A fraction is a part of a whole or set, a ratio or a quotient • Addition and subtraction of fractions or mixed numbers can be interpreted in the same way as addition and subtraction of whole numbers • Multiplication of fractions, for example, $\frac{2}{3} \times \frac{3}{4}$ is interpreted as $\frac{2}{3}$ of $\frac{3}{4}$ or $\frac{3}{4}$ of $\frac{2}{3}$ • Division of a fraction by a whole number is interpreted as partition (sharing)

MULTIPLICATION

YEAR ONE

Multiplication	
Adding the same number	<ul style="list-style-type: none"> • Multiplication is conceptualised as repeated addition
Making multiplication stories	<ul style="list-style-type: none"> • Tell stories based on the multiplication concept and repeated addition
Solving word problems	<ul style="list-style-type: none"> • Applying the multiplication concept to solve word problems

YEAR TWO

Multiplication	
How to multiply	<ul style="list-style-type: none"> • Multiplication is conceptualised as multiplying a fixed number of objects by a certain number of times. The fixed number of objects refers to the number of objects in a group. The number of groups refers to the number of times it is multiplied
Multiplying by 2 and 3	
Multiplying by 2: skip-counting	<ul style="list-style-type: none"> • Multiplication is interpreted as repeated addition and as groups of items
Multiplying by 2: using dot paper	<ul style="list-style-type: none"> • The 'relating facts' concept can be used to find a more difficult multiplication fact using dot paper
Multiplying by 3: skip-counting	<ul style="list-style-type: none"> • Multiplication is interpreted as repeated addition and as groups of items
Multiplying by 3: using dot paper	<ul style="list-style-type: none"> • The 'relating facts' concept can be used to find a more difficult multiplication fact using dot paper
Multiplying by 4, 5 and 10	
Multiplying by 4: skip-counting	<ul style="list-style-type: none"> • Multiplication is conceptualised as repeated addition, groups of items, or multiplying
Multiplying by 4: using dot paper	<ul style="list-style-type: none"> • The 'group and number of items in each group' concept is applied
Multiplying by 5: skip-counting	<ul style="list-style-type: none"> • Multiplication is conceptualised as groups of items and as sequential numbers in the 'skip-counting' strategy
Multiplying by 5: using dot paper	<ul style="list-style-type: none"> • The 'group and number of items in each group' concept is applied
Multiplying by 10: skip-counting and using dot paper	<ul style="list-style-type: none"> • Multiplication is interpreted as groups of items and as sequential numbers in the 'skip-counting' strategy

Using Models: Multiplication	
Multiplication	<ul style="list-style-type: none"> • Multiplication is conceptualised as the total number of items, given groups of items

Mass	
Multiplication of mass	<ul style="list-style-type: none"> Pupils can use concepts in multiplication and division to solve multiplication and division problems
Length	
Multiplication of length	<ul style="list-style-type: none"> The 'multiplication' and 'division' concepts in numbers are applied in this section

YEAR THREE

5 Multiplying by 6, 7, 8 and 9	
Multiplying by 6: skip-counting	<ul style="list-style-type: none"> The 'group and item' concept is used for the multiplication facts of 6 Repeated addition is used for multiplication
Multiplying by 7: skip-counting	<ul style="list-style-type: none"> The 'group and item' concept is used for the multiplication facts of 7 Repeated addition is used for multiplication
Multiplying by 8: skip-counting	<ul style="list-style-type: none"> The 'group and item' concept is used for the multiplication facts of 8 Repeated addition is used for multiplication
Multiplying by 9	<ul style="list-style-type: none"> The 'group and item' concept is used for the multiplication facts of 9 Repeated addition is used for multiplication
Short cut method for multiplying by 6, 7, 8 and 9	<ul style="list-style-type: none"> The relating facts concept is used to find a more difficult multiplication fact
6 Multiplication	
Multiplication without regrouping	<ul style="list-style-type: none"> A number up to 1000 can be conceptualised as the sum of its values in the ones, tens and hundreds places Multiplication of a 2-digit number or a 3-digit number by a 1-digit number is the sum of multiplying values from different places
Multiplication with regrouping in ones, tens and hundreds	
Multiplication with regrouping in ones, tens, hundreds and thousands	<ul style="list-style-type: none"> A number up to 1000 can be conceptualised as the sum of its values in the ones, tens and hundreds places Multiplication of a 2-digit number or a 3-digit number by a 1-digit number is the sum of multiplying values from different places Regrouping in ones, tens, hundreds and thousands is used in multiplication

Solving Word Problems 2: Multiplication	
Multiplication: one-step word problems	<ul style="list-style-type: none"> The multiple concept in multiplication is used to compare two sets of items Bar diagrams can be based on problem situations in multiplication
Multiplication: two-step word problems	<ul style="list-style-type: none"> Multiplication concepts including 'multiple' and 'group and item' are used for solving two-step word problems Addition concepts such as 'adding on' and 'part-whole' are used for solving two-step word problems Subtraction concepts such as 'taking away' and 'part-whole' are used for solving two-step word problems

Mental Calculations	
Mental multiplication	<ul style="list-style-type: none"> Reversing the order of groups and items in a multiplication concept produces the same product
Solving Word Problems: Length, Mass and Volume	
One-step word problems	<ul style="list-style-type: none"> Concepts of addition, subtraction, multiplication and division in whole numbers are applied to solve word problems on length, mass and volume
Two-step word problems	<ul style="list-style-type: none"> Concepts in the four operations are applied to solve two-step word problems

YEAR FOUR

Whole Numbers	
Multiplication by a 1-digit number	<ul style="list-style-type: none"> Using a formal algorithm to multiply numbers up to 4 digits by a 1-digit whole number Using regrouping in multiplication
Multiplication by a 2-digit number	<ul style="list-style-type: none"> Using a formal algorithm to multiply numbers up to 3 digits by a 2-digit whole number Using regrouping in multiplication

Word problems	<ul style="list-style-type: none"> Applying concepts in the 4 operations to solve word problems up to 3 steps involving whole numbers and the 4 operations (some word problems are solved with the help of models)
---------------	---

Decimals (2)	
Multiplication	<p>Multiplication of a decimal by a whole number can be interpreted as:</p> <ul style="list-style-type: none"> repeated addition of the decimal comparison of one quantity with another, i.e. one quantity is n times as much as the other
Word problems	<ul style="list-style-type: none"> Application of the concepts of multiplication and division of a decimal by a whole number to solving word problems

YEAR FIVE

Fractions (2)	
Product of proper fractions	<ul style="list-style-type: none"> Multiplying two fractions is the same as finding the fractional part of another fraction
Word problems (1)	<ul style="list-style-type: none"> The product of two proper fractions is the fractional part of another fraction
Product of an improper fraction and a proper or improper fraction	<ul style="list-style-type: none"> Multiplying a fraction and another fraction is the same as finding the fractional part of another fraction
Product of a mixed number and a whole number	<ul style="list-style-type: none"> The product of a whole and a mixed number refers to the group and item multiplication concept
Word problems (2)	<ul style="list-style-type: none"> Use the group and item multiplication concept to find the product of a whole number and a mixed number
Area of a triangle	
Finding the area of a triangle	<ul style="list-style-type: none"> The area of a triangle is half that of its related rectangle Area of a triangle = $\frac{1}{2} \times \text{Base} \times \text{Height}$
Decimals	

Multiplying by tens, hundreds and thousands	<ul style="list-style-type: none"> When a number is multiplied by 10, 100 or 1000, each digit in the number moves 1, 2 or 3 places respectively to the left in the place value chart When a number is multiplied by 10, 100 or 1000, the decimal place shifts 1, 2 or 3 places respectively to the right
Word problems	<ul style="list-style-type: none"> Application of concepts and skills of the four operations to solving word problems

Volume of Cubes and Cuboids	
Understanding and measuring volume	<ul style="list-style-type: none"> Volume is the amount of space an object occupies Volume is measured in cubic units Volume can be measured in different units, including cm^3 and m^3
Volume of a cuboid and of liquid	<ul style="list-style-type: none"> Volume of a cube = Edge x Edge x Edge Volume of a cuboid = Length x Width x Height Volume of liquid in a container that is completely filled is equal to the capacity of the container

YEAR SIX

Fractions	
Four operations with fractions	<ul style="list-style-type: none"> A fraction is a part of a whole or set, a ratio or a quotient Addition and subtraction of fractions or mixed numbers can be interpreted in the same way as addition and subtraction of whole numbers Multiplication of fractions, for example, $\frac{2}{3} \times \frac{3}{4}$ is interpreted as $\frac{2}{3}$ of $\frac{3}{4}$ or $\frac{3}{4}$ of $\frac{2}{3}$ Division of a fraction by a whole number is interpreted as partition (sharing)
Ratio	
Word problems (1)	<ul style="list-style-type: none"> Fractions and ratios can be used to show the relative amounts of two quantities The multiple concept in multiplication is another comparative tool to show the relative amount of two quantities

Circles	
Area of a circle	<ul style="list-style-type: none"> The area of a circle is equal to $\pi \times \text{Radius} \times \text{Radius}$
11 Volume of Solids and Liquids	
Volume of solids	<ul style="list-style-type: none"> The volume of a cuboid is the product of its length, width and height The square root of a number n is the number m so that $m \times m = n$ The cube root of a number n is the number m so that $m \times m \times m = n$

DIVISION

YEAR ONE

Division	
Sharing equally	<ul style="list-style-type: none"> • Division is conceptualised as dividing a set of objects equally
Finding the numbers of groups	<ul style="list-style-type: none"> • Division is conceptualised as sharing a set of items equally into groups

YEAR TWO

Division	
How to divide	<ul style="list-style-type: none"> • Division is conceptualised as sharing or dividing a set of items into equal groups so that each group has the same number of items
Division	<ul style="list-style-type: none"> • Division is the inverse of multiplication
Division	<ul style="list-style-type: none"> • Division is conceptualised as the inverse of multiplication and as the equal sharing of items

8 Length	
Multiplication and division of length	<ul style="list-style-type: none"> • The 'multiplication' and 'division' concepts in numbers are applied in this section
Mass	
Multiplication and division of mass	<ul style="list-style-type: none"> • Pupils can use concepts in multiplication and division to solve multiplication and division problems
11 Money	
Word problems	<ul style="list-style-type: none"> • Solving one-step or two-step word problems involving money using addition and subtraction • Solving one-step or two-step word problems involving money using multiplication and division

YEAR THREE

Division	
Quotient and remainder	<ul style="list-style-type: none"> • Division of a 2-digit number by a 1-digit number with remainder
Odd and even numbers	<ul style="list-style-type: none"> • Recognising patterns to identify odd and even numbers
Division without remainder and regrouping	<ul style="list-style-type: none"> • Expressing a number as a sum of values of different places • Dividing equally with no remainder
Division with regrouping in tens and ones	<ul style="list-style-type: none"> • Expressing a number as a sum of values of different places • Dividing equally with or without remainder • Regrouping from values of a higher place (tens) to a lower place (ones) in division
Division with regrouping in	<ul style="list-style-type: none"> • Expressing a number as a sum of values of different places

hundreds, tens and ones	<ul style="list-style-type: none"> Dividing equally with or without remainder Regrouping from values of a higher place (e.g., hundreds) to a lower place (e.g., tens) in division
-------------------------	---

Solving Word Problems 2: Multiplication and Division

Division: one-step word problems	<ul style="list-style-type: none"> The division concepts: finding the number of groups and the number of items in each group are applied Division is the inverse of multiplication
Division: two-step word problems	<ul style="list-style-type: none"> Division concepts using 'group and item' are used for solving two-step word problems Addition concepts such as 'adding on' and 'part-whole' are used for solving two-step word problems Subtraction concepts such as 'taking away' and 'part-whole' are used for solving two-step word problems

Mental Calculations

Mental division	<ul style="list-style-type: none"> Division is the inverse of multiplication
-----------------	---

12 Solving Word Problems: Length, Mass and Volume

One-step word problems	<ul style="list-style-type: none"> Concepts of addition, subtraction, multiplication and division in whole numbers are applied to solve word problems on length, mass and volume
Two-step word problems	<ul style="list-style-type: none"> Concepts in the four operations are applied to solve two-step word problems

YEAR FIVE

4 Fractions (2)

Dividing a fraction by a whole number	<ul style="list-style-type: none"> Division in fractions is dividing each fractional part into smaller equal parts/units
Word problems (3)	<ul style="list-style-type: none"> The concepts of the four operations and division of a fraction are applied

Decimals

Dividing by tens, hundreds and thousands	<ul style="list-style-type: none"> When a number is divided by 10, 100 or 1000, each digit in the number moves 1, 2 or 3 places respectively to the right in the place value chart When a number is divided by 10, 100 or 1000, the decimal place shifts 1, 2 or 3 places respectively to the left Dividing by 10 is the same as multiplying by $\frac{1}{10}$
Word problems	<ul style="list-style-type: none"> Application of concepts and skills of the four operations to solving word problems

YEAR SIX

Fractions

Four operations with fractions	<ul style="list-style-type: none"> A fraction is a part of a whole or set, a ratio or a quotient Addition and subtraction of fractions or mixed numbers can be interpreted in the same way as addition and subtraction of whole numbers Multiplication of fractions, for example, $\frac{2}{3} \times \frac{3}{4}$ is interpreted as $\frac{2}{3}$ of $\frac{3}{4}$ or $\frac{3}{4}$ of $\frac{2}{3}$ Division of a fraction by a whole number is interpreted as partition (sharing)
--------------------------------	---

Dividing by a proper fraction

- Division by a proper fraction is interpreted as measurement division; e.g., $3 \div \frac{2}{3}$ or $\frac{3}{4} \div \frac{2}{3}$ is interpreted as the number of two-thirds in 3 or $\frac{3}{4}$

SHAPES PATTERNS AND GEOMETRY

YEAR ONE

Shapes and Patterns	
Getting to know shapes	<ul style="list-style-type: none"> • A circle has no corners and no sides • A square has 4 equal sides and 4 corners • A triangle has 3 sides and 3 corners • A rectangle has 4 sides (opposite sides are equal) and 4 corners
Making pictures from shapes	<ul style="list-style-type: none"> • Shapes such as circles, triangles, squares and rectangles can be used to make pictures
Seeing shapes in things around us	<ul style="list-style-type: none"> • When an object is viewed from different angles/sides, we can see different shapes. For example, the top view of a tin of soup is a circle
Getting to know patterns	<ul style="list-style-type: none"> • Patterns are formed by repeating a particular arrangement of shape, size and/or colour placed next to each other
Making more patterns	<ul style="list-style-type: none"> • Patterns can be formed by repeating a particular arrangement of objects placed next to each other

YEAR TWO

17 Shapes and Patterns	
2D shapes	<ul style="list-style-type: none"> • Identifying semicircles and quarter circles
3D shapes	<ul style="list-style-type: none"> • Shapes can be visualised as 3D shapes
Making patterns	<ul style="list-style-type: none"> • Patterns are made by repeating sequences

TABLES AND GRAPHS

YEAR ONE

Picture graphs	
Simple picture graphs	<ul style="list-style-type: none"> Data can be collected and organised into a horizontal or vertical picture graph for interpretation
More picture graphs	<ul style="list-style-type: none"> Data can be collected and organised into a horizontal or vertical picture graph using symbols

YEAR TWO

Graphs	
Reading picture graphs	<ul style="list-style-type: none"> Picture graphs represented by symbols can be compared and interpreted
Making picture graphs	<ul style="list-style-type: none"> Picture graphs can be made using different symbols and scales
More graphs	<ul style="list-style-type: none"> Interpreting picture graphs to solve problems

YEAR THREE

Bar Graphs	
Making bar graphs with scales	<ul style="list-style-type: none"> A bar graph represents synthesised data for presentation
Reading and interpreting bar graphs	<ul style="list-style-type: none"> Whole number concepts are applied to bar graphs in reading and interpretation of concepts

YEAR FOUR

Tables and Line Graphs	
Presenting and interpreting data in a table	<ul style="list-style-type: none"> Data involving two variables is presented in a table
More tables	<ul style="list-style-type: none"> A variable may be sub-classified into two or more sub-variables (E.g. 'Number of children' can be further classified into 'Number of boys' and 'Number of girls')

YEAR SIX

Pie Charts	
Understanding pie charts	<ul style="list-style-type: none"> The circle in a pie chart represents one whole or 100%

FRACTIONS

YEAR TWO

12 Fractions	
Understanding fractions	<ul style="list-style-type: none"> Fractions make up equal parts of a whole. Conversely, unequal parts are not fractions of a whole The symbol $\frac{1}{2}$ represents 1 out of 2 parts $\frac{2}{2}$ is a whole
More fractions	<ul style="list-style-type: none"> Using modelling as a concept to represent fraction contexts
Comparing and ordering fractions	<ul style="list-style-type: none"> Quantifying and comparing fractions
Adding and subtracting like fractions	<ul style="list-style-type: none"> Quantifying, adding and subtracting fractions
Solving word problems	<ul style="list-style-type: none"> Applying the 'adding on', 'taking away', 'part-whole' and comparing concepts in solving word problems involving fractions

YEAR THREE

Fractions	
Numerator and denominator	<ul style="list-style-type: none"> A whole is divided into parts and the fraction symbol is used to determine the parts of the whole The terms 'numerator' and 'denominator' give precise definition of parts of a whole
Understanding equivalent fractions	<ul style="list-style-type: none"> A length model with bars showing parts of whole is used to represent fractions Two equal parts of different divisions taken from the same whole number, with the same size, are equivalent
More equivalent fractions: short cut	<ul style="list-style-type: none"> The multiplying factor technique is applied to find equivalent fractions The dividing factor technique is applied to find equivalent fractions
Comparing fractions	<ul style="list-style-type: none"> Two fractions are equal when they are expressed as equivalent fractions Two fractions can be compared by referring to the values of the numerators when the denominators of the two fractions are the same Two fractions can be compared by referring to the values of the denominator when the numerators of the two fractions are the same
Adding fractions	<ul style="list-style-type: none"> Two fractions are related when the denominator of one fraction is a multiple of the denominator of the other fraction When adding related fractions, the related fractions are changed to like fractions first
Subtracting fractions	<ul style="list-style-type: none"> Two fractions are related when the denominator of one fraction is a multiple of the denominator of the other fraction When subtracting related fractions, the related fractions are changed to like fractions first

YEAR FOUR

Fractions	
Mixed numbers	<ul style="list-style-type: none"> • A mixed number is made up of a whole number and a proper fraction • A proper fraction is a part of a whole • A proper fraction is a number between 0 and 1
Improper fractions	<ul style="list-style-type: none"> • In an improper fraction, the numerator is equal to or greater than the denominator • An improper fraction is a number equal to or greater than 1 • Improper fractions are extensions of proper fractions
Conversion of fractions	<ul style="list-style-type: none"> • A mixed number and an improper fraction can represent the same number
Adding and subtracting fractions	<ul style="list-style-type: none"> • Two fractions are related when the denominator of one fraction is a multiple of the denominator of the other fraction • Two or more related fractions can be converted to equivalent fractions with denominators equal to that of the fraction with the greatest denominator
Fractions of a set	<ul style="list-style-type: none"> • A fraction is part of a set
Word problems	<ul style="list-style-type: none"> • Application of the concepts of a fraction as part of a whole and part of a set

YEAR FIVE

Fractions (1)	
Like and unlike fractions	<ul style="list-style-type: none"> • A fraction refers to a part of a whole • Like fractions are fractions with the same denominator • Unlike fractions are fractions with different denominators
Adding unlike fractions	<ul style="list-style-type: none"> • Fractions are equivalent when they show the same parts of the whole • Fractions can be added when they are expressed as like fractions
Subtracting unlike fractions	<ul style="list-style-type: none"> • Two fractions can be subtracted if they come from the same whole or from identical wholes
Fractions and division	<ul style="list-style-type: none"> • A whole number when divided by another whole number can result in: (a) a whole number with or without remainder (b) a proper fraction (c) a mixed number
Converting fractions to decimals	<ul style="list-style-type: none"> • Fractions and decimals are interchangeable • Decimals are a special type of fractions with denominators in tens, hundreds and thousands
Adding mixed numbers	<ul style="list-style-type: none"> • A mixed number comprises a whole number and a proper fraction • Mixed numbers can be added like adding proper and improper fractions
Subtracting mixed numbers	<ul style="list-style-type: none"> • A mixed number comprises a whole number and a proper fraction • Mixed numbers can be subtracted like subtracting proper and improper fractions
Word problems	<ul style="list-style-type: none"> • The following concepts are applied to fractions: part-whole concepts in addition and subtraction, comparison concept, adding-on in addition, taking-away in subtraction and division concept
Fractions (2)	
Product of proper fractions	<ul style="list-style-type: none"> • Multiplying two fractions is the same as finding the fractional part of another fraction
Word problems (1)	<ul style="list-style-type: none"> • The product of two proper fractions is the fractional part of another fraction
Product of an improper fraction and a proper or	<ul style="list-style-type: none"> • Multiplying a fraction and another fraction is the same as finding the fractional part of another fraction

improper fraction	
Product of a mixed number and a whole number	<ul style="list-style-type: none"> The product of a whole and a mixed number refers to the group and item multiplication concept
Word problems (2)	<ul style="list-style-type: none"> Use the group and item multiplication concept to find the product of a whole number and a mixed number
Dividing a fraction by a whole number	<ul style="list-style-type: none"> Division in fractions is dividing each fractional part into smaller equal parts/units
Word problems (3)	<ul style="list-style-type: none"> The concepts of the four operations and division of a fraction are applied

YEAR SIX

Fractions	
Four operations with fractions	<ul style="list-style-type: none"> A fraction is a part of a whole or set, a ratio or a quotient Addition and subtraction of fractions or mixed numbers can be interpreted in the same way as addition and subtraction of whole numbers Multiplication of fractions, for example, $\frac{2}{3} \times \frac{3}{4}$ is interpreted as $\frac{2}{3}$ of $\frac{3}{4}$ or $\frac{3}{4}$ of $\frac{2}{3}$ Division of a fraction by a whole number is interpreted as partition (sharing)
Dividing by a proper fraction	<ul style="list-style-type: none"> Division by a proper fraction is interpreted as measurement division; e.g., $3 \div \frac{2}{3}$ or $\frac{3}{4} \div \frac{2}{3}$ is interpreted as the number of two-thirds in 3 or $\frac{3}{4}$
Word problems	<ul style="list-style-type: none"> The process of problem solving in mathematics involves the application of concepts and strategies

MEASUREMENT

YEAR ONE

Length	
Comparing two things	<ul style="list-style-type: none"> The lengths of two objects can be compared using the terms 'tall/taller', 'long/longer', 'short/shorter' and 'high/higher'
Comparing more things	<ul style="list-style-type: none"> The lengths of more than two objects can be compared using the terms 'tallest', 'longest', 'shortest' and 'highest'
Using a start line	<ul style="list-style-type: none"> A common starting point makes comparison of lengths easier
Measuring things	<ul style="list-style-type: none"> Length can be measured using objects as non-standard units
Finding lengths in units	<ul style="list-style-type: none"> Length can be described using the term 'unit' instead of paper clips or lolly sticks
Mass	
Comparing things	<ul style="list-style-type: none"> Compare masses using a pan balance
Finding the masses of things	<ul style="list-style-type: none"> Mass can be measured using objects as non-standard units
Finding mass in units	<ul style="list-style-type: none"> Mass can be described using the term 'units'
Time	
Telling the time to the hour	<ul style="list-style-type: none"> Time can be used to measure the duration of an event
Telling the time to the half hour	<ul style="list-style-type: none"> Measuring half an hour using the term 'half past'
Money (1)	
Getting to know our money	<ul style="list-style-type: none"> Coins and notes in pounds and pence can be used to pay for goods and services
Exchanging money	<ul style="list-style-type: none"> A coin or note of one denomination can be used as the equivalent of another set of coins or notes of a smaller denomination
Work out the amount of money	<ul style="list-style-type: none"> The amount of money can be counted in pence (up to £1) and pounds (up to £100)
Money (2)	
Adding and subtracting in pence	<ul style="list-style-type: none"> Addition and subtraction concepts in numbers are used in addition and subtraction of money
Adding and subtracting in pounds	
Solving word problems	<ul style="list-style-type: none"> The 'part-whole', 'adding on', 'taking away' and 'comparing' concepts in addition and

subtraction are used in solving word problems

YEAR TWO

8 Length	
Measuring in metres	<ul style="list-style-type: none"> Length is a concept of measurement to determine how long or short an object is The metre (m) is a unit of measurement for length
Comparing lengths in metres	<ul style="list-style-type: none"> The metre is a medium for measuring and comparing
Measuring in centimetres	<ul style="list-style-type: none"> Length is a concept of measurement to determine how long or short an object is The centimetre (cm) is a unit of measurement for length
Comparing lengths in centimetres	<ul style="list-style-type: none"> The centimetre is used to measure and compare the lengths of two or more objects
Addition and subtraction of length	<ul style="list-style-type: none"> The 'addition' and 'subtraction of numbers' concepts and techniques are applied in this section
Multiplication and division of length	<ul style="list-style-type: none"> The 'multiplication' and 'division' concepts in numbers are applied in this section
9 Mass	
Measuring in kilograms	<ul style="list-style-type: none"> The kilogram (kg) is a unit of measurement for mass
Comparing masses in kilograms	<ul style="list-style-type: none"> The kilogram (kg) is used as a medium to find the masses of objects and compare masses
Measuring in grams	<ul style="list-style-type: none"> The gram (g) is a unit of measurement for mass
Comparing masses in grams	<ul style="list-style-type: none"> An object can be heavier or lighter than another based on the masses of the two objects
Addition and subtraction of mass	<ul style="list-style-type: none"> The process of addition and subtraction of mass is similar to addition and subtraction of whole numbers
Multiplication and division of mass	<ul style="list-style-type: none"> Pupils can use concepts in multiplication and division to solve multiplication and division problems

Time	
The minute hand	<ul style="list-style-type: none"> The minute is a measure of time The minute hand of the clock is used to indicate the time in minutes
Reading and writing the time	<ul style="list-style-type: none"> Hours and minutes are measures of time
Learning a.m. and p.m.	<ul style="list-style-type: none"> Time is told in a.m. and p.m. 'a.m.' is used for time after 12 midnight to just before 12 noon 'p.m.' is used for time after 12 noon to just before 12 midnight
Time taken in hours and minutes	<ul style="list-style-type: none"> 'Hour' is written as h and 'minutes' is written as mins Time taken between two given times is measured in h and mins

Money	
Counting pounds and pence	<ul style="list-style-type: none"> The dot separates the pounds from the pence
Changing pounds and pence	<ul style="list-style-type: none"> £1 = 100p When changing pence to pounds, use the dot to separate the pounds from the pence When changing pounds to pence, remove the dot from the pounds
Comparing amounts of money	<ul style="list-style-type: none"> Comparing amounts of money by comparing the pounds followed by the pence
Word problems	<ul style="list-style-type: none"> Solving one-step or two-step word problems involving money using addition and subtraction Solving one-step or two-step word problems involving money using multiplication and division

Volume	
Getting to know volume	<ul style="list-style-type: none"> The capacity of a container is the amount of space it can hold The volume of a container is the amount of space it contains
Measuring in litres	<ul style="list-style-type: none"> The litre (ℓ) is a unit of measurement for volume
Addition and subtraction of volumes	<ul style="list-style-type: none"> Volume in litres can be added and subtracted like whole numbers
Multiplication and division of volumes	<ul style="list-style-type: none"> Volume in litres can be multiplied and divided like whole numbers

YEAR THREE

Length, Mass and Volume	
Metres and centimetres	<ul style="list-style-type: none"> Visualising and measuring in compound units, metres (m) and centimetres (cm)
Kilometres and metres	<ul style="list-style-type: none"> Visualising and measuring in compound units, kilometres (km) and metres (m)
Kilograms and grams	<ul style="list-style-type: none"> Visualisation and measurement of a kilogram (kg) and a gram (g)
Litres and millilitres	<ul style="list-style-type: none"> Visualisation and measurement of volume and capacity in litres (l) and millilitres (ml)
Solving Word Problems: Length, Mass and Volume	
One-step word problems	<ul style="list-style-type: none"> Concepts of addition, subtraction, multiplication and division in whole numbers are applied to solve word problems on length, mass and volume
Two-step word problems	<ul style="list-style-type: none"> Concepts in the four operations are applied to solve two-step word problems
Length, Mass and Volume	
Metres and centimetres	<ul style="list-style-type: none"> Visualising and measuring in compound units, metres (m) and centimetres (cm)
Kilometres and metres	<ul style="list-style-type: none"> Visualising and measuring in compound units, kilometres (km) and metres (m)
Kilograms and grams	<ul style="list-style-type: none"> Visualisation and measurement of a kilogram (kg) and a gram (g)
Litres and millilitres	<ul style="list-style-type: none"> Visualisation and measurement of volume and capacity in litres (l) and millilitres (ml)

Time	
Telling the time	<ul style="list-style-type: none"> Using 'past' and 'to' in telling the time
Conversion of hours and minutes	<ul style="list-style-type: none"> Pupils use $1 \text{ h} = 60 \text{ mins}$ to convert the time
Addition	<ul style="list-style-type: none"> Hours and minutes can be added like whole numbers Regrouping concepts ($60 \text{ mins} = 1 \text{ h}$) are applied to whole numbers
Subtraction	<ul style="list-style-type: none"> Hours and minutes can be subtracted like whole numbers Regrouping concepts ($60 \text{ mins} = 1 \text{ h}$) are applied to whole numbers
Duration in hours and minutes	<ul style="list-style-type: none"> Say the duration of time in hours, minutes and hours and minutes
Word problems	<ul style="list-style-type: none"> Use of the unitary method is required to solve problems

Money	
Addition	<ul style="list-style-type: none"> Adding money is similar to adding whole numbers
Subtraction	<ul style="list-style-type: none"> Subtracting money is similar to subtracting whole numbers
Word problems	<ul style="list-style-type: none"> Concepts in adding and subtracting whole numbers are applied in problems involving money

YEAR FOUR

Time	
Seconds	<ul style="list-style-type: none"> A second is a unit of measurement of time $60 \text{ seconds} = 1 \text{ minute}$
24-hour clock	<ul style="list-style-type: none"> Time can be expressed using the 12-hour or the 24-hour clock notation Duration can be measured in hours and minutes

YEAR FIVE

Measurements	
Converting a measurement from a larger unit to a smaller unit	<ul style="list-style-type: none"> Understanding direct proportion
Converting a measurement from a smaller unit to a larger unit	<ul style="list-style-type: none"> Understanding direct proportion

GEOMETRY

YEAR TWO

Lines and Surfaces	
Straight lines and curves	<ul style="list-style-type: none"> • Represent lengths with straight lines • Interpret straight lines with given lengths
Flat surfaces	<ul style="list-style-type: none"> • Identifying flat surfaces and curved surfaces

YEAR THREE

Angles	
Understanding angles	<ul style="list-style-type: none"> • An angle is a measure of the amount of turning
Identifying angles	<ul style="list-style-type: none"> • Angles are measurements of turning which can also be made using 2D shapes
Right angles	<ul style="list-style-type: none"> • A right angle is a special type of angle, which is formed by two straight lines meeting at a point
Perpendicular and Parallel Lines	
Perpendicular lines	<ul style="list-style-type: none"> • When two straight lines intersect each other at right angles, they are perpendicular to each other
Drawing perpendicular lines	<ul style="list-style-type: none"> • Perpendicular lines are made when two lines meet at a right angle
Parallel lines	<ul style="list-style-type: none"> • Parallel lines are two straight lines drawn in such a way that they will never meet and the distance between them will always be the same
Drawing parallel lines	
Area and Perimeter	
Area	<ul style="list-style-type: none"> • Area is the amount of space that covers the surface of a shape • The amount of space is measured by the number of standard units
Square centimetres (cm ²)	<ul style="list-style-type: none"> • A square centimetre is a standard unit for measuring area
Square metres (m ²)	<ul style="list-style-type: none"> • A square metre is a standard unit for measuring bigger areas
Perimeter and area	<ul style="list-style-type: none"> • Perimeter is the distance around a shape • Area is the amount of space that covers the surface of the shape
More perimeter	<ul style="list-style-type: none"> • Perimeter is the distance around a shape
Area of a rectangle	<ul style="list-style-type: none"> • The area of a rectangle is the amount of space that covers the surface • The area of a rectangle is the same as length × width of the rectangle

YEAR FOUR

Angles	
Understanding angles (Naming angles)	<ul style="list-style-type: none"> • An angle is an amount of turning and not the amount of space

Understanding angles (Measuring angles)	<ul style="list-style-type: none"> Angles are named as $\angle ABC$ or $\angle a$
Drawing angles to 180°	<ul style="list-style-type: none"> Drawing angles up to 180°
Turns and right angles	<ul style="list-style-type: none"> A right angle (a quarter turn) is 90°, 2 right angles (a half turn) is 180°, 3 right angles (a three-quarter turn) is 270° and 4 right angles (a complete turn) is 360°
8-point compass	<ul style="list-style-type: none"> Know the directions: north (N), south (S), east (E), west (W), north-east (NE), north-west (NW), south-east (SE), south-west (SW)

Perpendicular and Parallel Lines	
Drawing perpendicular lines	<ul style="list-style-type: none"> Perpendicular lines meet or intersect at right angles
Drawing parallel lines	<ul style="list-style-type: none"> Parallel lines never meet The perpendicular distance between a pair of parallel lines is equal at every point on the lines
Horizontal and vertical lines	<ul style="list-style-type: none"> A horizontal line is a line on level ground or parallel to the level ground A vertical line is a line perpendicular to the level ground
Squares and Rectangles	
Squares and rectangles	<ul style="list-style-type: none"> A square is a four-sided shape in which all the sides are equal and all the angles are right angles A rectangle is a four-sided shape in which the opposite sides are equal and all the angles are right angles
More on squares and rectangles	<ul style="list-style-type: none"> Properties of squares (all the sides are equal and each angle = 90°) and rectangles (opposite sides are equal and each angle = 90°)

Area and Perimeter	
Rectangles and squares	<ul style="list-style-type: none"> The perimeter of a plane closed figure is the distance around the figure. For a rectangle, the perimeter is $2 \times (\text{Length} + \text{Width})$ and for a square, it is $4 \times \text{length of side}$ The area of a plane closed figure is the amount of surface inside the figure. For a rectangle, the area is $\text{Length} \times \text{Width}$ and for a square, it is $\text{Side} \times \text{Side}$
Composite shapes	<ul style="list-style-type: none"> The perimeter of a composite shape is the total distance around it The area of a composite shape is the sum of the areas of all the individual rectangles and squares that make up the composite shape Area of a rectangle = $\text{Length} \times \text{Width}$ and Area of a square = $\text{Side} \times \text{Side}$ Opposite sides of a rectangle are equal The four sides of a square are equal
Solving word problems	<ul style="list-style-type: none"> Application of the concepts of area and perimeter of squares and rectangles to solving word problems
Symmetry	
Identifying symmetrical shapes	<ul style="list-style-type: none"> A symmetrical shape has a line of symmetry which divides the shape into two equal parts When folded along the line of symmetry, the two parts fit exactly

Identifying lines of symmetry	<ul style="list-style-type: none"> A line of symmetry divides the shape into two equal parts so that the two parts fit exactly when the shape is folded along this line
Making symmetrical shapes and patterns	<ul style="list-style-type: none"> A shape is symmetrical along a line if the line divides the shape into two equal parts and the parts fit exactly when the shape is folded along this line
Tessellations	
Identifying tessellations	<ul style="list-style-type: none"> A shape can be tessellated if any number of them can be fitted together to cover a surface without any gaps or overlapping. If necessary, the shape can be rotated, but not flipped over
More tessellations	<ul style="list-style-type: none"> A tessellating shape can cover a surface without any gaps Some tessellating shapes can cover a surface in more than one way A tessellating shape can be created from another

YEAR FIVE

Area of a triangle	
Base and height of a triangle	<ul style="list-style-type: none"> Any side of a triangle can be the base and for each base, there is a corresponding height
Finding the area of a triangle	<ul style="list-style-type: none"> The area of a triangle is half that of its related rectangle Area of a triangle = $\frac{1}{2} \times \text{Base} \times \text{Height}$

Angles	
Angles on a straight line	<ul style="list-style-type: none"> An angle ($\leq 180^\circ$) is made when two straight lines meet at a point A unit of measurement of angles is the degree The sum of angles on a straight line is 180°
Angles at a point	<ul style="list-style-type: none"> The sum of angles at a point is 360°
Vertically opposite angles	<ul style="list-style-type: none"> Vertically opposite angles are made by two intersecting straight lines Vertically opposite angles are equal
Properties of Triangles and 4-sided Shapes	
Angles of a triangle	<ul style="list-style-type: none"> Sum of angles in a triangle = 180°
Right-angled, isosceles and equilateral triangles (Right-angled triangles)	<ul style="list-style-type: none"> A right-angled triangle has one angle equal to 90°
Right-angled, isosceles and equilateral triangles (Isosceles triangles)	<ul style="list-style-type: none"> An isosceles triangle has two equal sides
Right-angled, isosceles and equilateral triangles (Equilateral triangles)	<ul style="list-style-type: none"> An equilateral triangle has three equal sides
Parallelograms, rhombuses and trapeziums (Parallelograms)	<p>A parallelogram is a 4-sided shape in which:</p> <ul style="list-style-type: none"> the opposite sides are parallel the opposite angles are equal each pair of angles between parallel sides adds up to 180°
Parallelograms, rhombuses and trapeziums (Rhombuses)	<ul style="list-style-type: none"> A rhombus is a parallelogram with four equal sides where the opposite angles are equal and each pair of angles between parallel sides adds up to 180°
Parallelograms, rhombuses	<ul style="list-style-type: none"> A trapezium is a 4-sided shape in which only one pair of opposite sides is parallel and each

and trapeziums (Trapeziums)	pair of angles between parallel sides adds up to 180°
-----------------------------	--

YEAR SIX

Angles in Shapes and Diagrams	
Finding unknown angles	<ul style="list-style-type: none"> Understanding and applying the properties of angles, triangles, squares, rectangles, parallelograms, rhombuses and trapeziums

Nets	
Solids	<ul style="list-style-type: none"> Cubes and cuboids have rectangular faces (including squares) Prisms have rectangular faces (including squares) and two identical polygonal faces (which could also be rectangles) Pyramids have triangular faces that meet at a point and a polygonal base Cylinders have a curved surface and two identical circular bases (at the ends) Cones have a curved surface and a circular base
Nets of solids	<ul style="list-style-type: none"> A net of a solid is a diagram that can be folded to make the solid A solid can have different nets

Circles	
Radius, diameter and circumference	<ul style="list-style-type: none"> A radius of a circle is any straight line from the centre to a point on the circumference A diameter of a circle is any straight line that joins two points on the circumference and passes through the centre The circumference of a circle is its perimeter The ratio of the circumference of a circle to its diameter is the constant π

Area and Perimeter	
Area and perimeter of composite shapes	<ul style="list-style-type: none"> The properties of squares, rectangles, triangles and circles Formulae can be used to find the perimeters and areas of squares, rectangles and triangles, as well as the circumference and area of circles
Volume of Solids and Liquids	
Volume of solids	<ul style="list-style-type: none"> The volume of a cuboid is the product of its length, width and height The square root of a number n is the number m so that $m \times m = n$ The cube root of a number n is the number m so that $m \times m \times m = n$
Volume of liquids	<ul style="list-style-type: none"> The volume of liquid in a full container is given by the capacity of the container Liquid in a container takes the shape of the container Rate is an example of direct proportion, and problems involving rate can be solved using the unitary method

STATISTICS

YEAR FIVE

9 Mean (average)	
Understanding mean (average)	<ul style="list-style-type: none"> The total amount or sum of the data is found by multiplication: Total = Mean x Number of data or items
Word problems	<ul style="list-style-type: none"> Applying the mean concept and part-whole concept to solve problems involving more than one set of items
Percentage	
Per cent	<ul style="list-style-type: none"> 5% means 5 out of 100 Percentage is a specific fraction where the denominator is 100
Converting more fractions to percentages	<ul style="list-style-type: none"> Fractions and percentages are two representations for comparison of numbers Percentage is a specific fraction where the denominator is 100
Percentage of a quantity	<ul style="list-style-type: none"> Percentage of a quantity refers to part of a whole where the whole is equivalent to 100 units
Word problems	<ul style="list-style-type: none"> 100 parts = the whole = 100%
Ratio	
Finding ratio	<ul style="list-style-type: none"> Ratio is a way of comparing the relative sizes of two quantities or sets of items
Equivalent ratios	<ul style="list-style-type: none"> Finding the common factor of the terms of the ratio of two quantities Dividing the terms of a ratio of two quantities by the common factor to express a ratio in its simplest form
Word problems (1)	<ul style="list-style-type: none"> Applying equivalent ratio concept, part-whole concept, taking away concept and comparison concept to solve up to 2-step word problems involving ratio of two quantities
Comparing three quantities	<ul style="list-style-type: none"> Ratio is a way of comparing the relative sizes of three quantities or sets of items
Word problems (2)	<ul style="list-style-type: none"> Applying equivalent ratio concept, part-whole concept and comparison concept to solve up to 2-step word problems involving ratio of three quantities

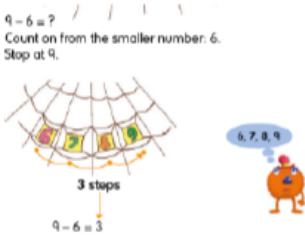

YEAR SIX

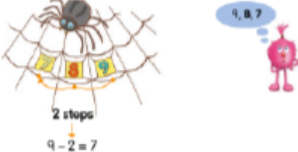

Ratio	
Ratio and fraction	<ul style="list-style-type: none"> The ratio of one quantity to another quantity may not represent the actual number of items in each group A simplified ratio of two quantities shows the relative amount of each quantity with respect to the other
Word problems (1)	<ul style="list-style-type: none"> Fractions and ratios can be used to show the relative amounts of two quantities The multiple concept in multiplication is another comparative tool to show the relative amount of two quantities
Comparing ratios	<ul style="list-style-type: none"> The quantities in fixed ratios increase or decrease by the same multiple
Word problems (2)	<ul style="list-style-type: none"> When quantities are increased or decreased in relation to each other, the ratios of the quantities are also changed

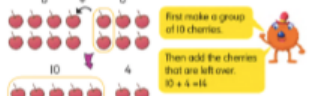

Percentage	
Finding percentages	<ul style="list-style-type: none"> Percentages are similar to decimal fractions A percentage is a special type of decimal fraction, giving the number of parts out of 100 equal parts rather than out of 1
Word problems (1)	<ul style="list-style-type: none"> Applying the concepts learnt on percentage to solve word problems using a variety of strategies
Word problems (2)	<ul style="list-style-type: none"> Applying the concepts learnt on percentage and a variety of strategies to solve higher-order word problems
Speed	
Distance and speed	<ul style="list-style-type: none"> Speed is defined as the distance travelled per unit of time The greater the distance travelled per unit of time, the faster the speed
Average speed	<ul style="list-style-type: none"> Average speed is not the mean of two or more speeds Average speed is the mean distance travelled per unit of time Average speed is calculated by dividing the total distance travelled by the total time taken
Word problems	<ul style="list-style-type: none"> Applying combinations of concepts such as mean (average), speed and rate to solve higher-order word problems

<p>The foundations of fractions are laid in Inspire Maths 1 by analyzing parts and whole using the 'part-whole' strategy. This appears throughout IM1A and IM1B.</p> <p>part 3 whole 8 part 5 whole 8</p> <p>Key vocabulary</p> <ul style="list-style-type: none"> - part: TG1A p32 - whole: TG1A p32 	<p>Fractions: TG2B Unit 12 p56</p> <p>Key concepts: Understanding fractions by using shapes to represent one whole with denominators up to 12 and write fractions with denominators up to 12 from given shapes.</p> <p>- Using model drawing as a concept to represent fraction contexts:</p> <p>Let's use models to show fractions.</p> <p>The model shows a whole with 5 equal parts. 2 parts are red and 3 parts are yellow. What fraction of the whole is red? Number of red parts = 2 Number of parts altogether = 5 The fraction of the whole in red is $\frac{2}{5}$.</p> <p>The fraction of the whole in yellow is $\frac{3}{5}$. 2 parts + 3 parts = 5 parts or 1 whole. $\frac{2}{5}$ and $\frac{3}{5}$ make 1 whole.</p> <p>- Compare and order two or more fractions with the same denominator using rectangular strips or model drawings of the same size:</p>	<p>Fractions: TG3B Unit 14 p116</p> <p>- Numerator and denominator:</p> <p>$\frac{2}{3}$ = numerator / denominator</p> <p>In the fraction $\frac{2}{3}$, 2 is the numerator, and 3 is the denominator.</p> <p>- Understanding equivalent fractions using a fraction strip (paper) to show equal parts and write equivalent parts of a given fraction with the help of a model drawing:</p> <p>Look at these fraction strips.</p> <p>One whole 1 out of 2 equal parts = $\frac{1}{2}$ 2 out of 4 equal parts = $\frac{2}{4}$ 4 out of 8 equal parts = $\frac{4}{8}$</p> <p>The fractions $\frac{1}{2}$, $\frac{2}{4}$ and $\frac{4}{8}$ have different numerators and denominators. $\frac{1}{2}$ is equal to $\frac{2}{4}$. $\frac{1}{2}$ is also equal to $\frac{4}{8}$. $\frac{1}{2}$, $\frac{2}{4}$ and $\frac{4}{8}$ are equivalent fractions.</p> <p>- Write equivalent fractions of a given fraction using the multiplying/dividing factor technique expressing in its simplest form.</p>	<p>Fractions: TG4A Unit 5 p 137</p> <p>- Express, interpret, read, draw and mark mixed numbers on a number line and as region models (translating pictorial representations of mixed numbers to symbolic and vice versa).</p> <p>- Express, interpret, read, draw and mark improper fractions on a number line and as region models (translating pictorial representations of improper fractions to symbolic and vice versa):</p> <p>Ruby has some pieces of ribbon.</p> <p>A $\frac{1}{2}$ m = 1 third B $\frac{2}{3}$ m = 2 thirds C $\frac{3}{4}$ m or 1 m = 3 thirds D $\frac{4}{4}$ m or 1 m = 4 thirds</p> <p>Look at piece D. It is $\frac{1}{2}$ m long. There are 4 thirds in $\frac{1}{2}$ m. $\frac{1}{2}$ m = $\frac{1}{2} \times \frac{2}{2}$ = $\frac{1 \times 2}{2 \times 2}$ = $\frac{2}{4}$ $\frac{2}{4}$ = $\frac{1}{2}$</p> <p>$\frac{5}{4}$, $\frac{6}{4}$ and $\frac{7}{4}$ are equal to or greater than 1. They are called improper fractions.</p>	<p>Fractions (1): TG5A Unit 3 p116</p> <p>- Identifying and differentiating like and unlike fractions:</p> <p>a Jack had $\frac{1}{5}$ of a basket. Ella had $\frac{2}{5}$ of a basket. $\frac{1}{5}$ and $\frac{2}{5}$ are like fractions. They have the same denominator, 5.</p> <p>b Peter had $\frac{1}{3}$ of a pizza. Ruby had $\frac{2}{4}$ of a pizza. $\frac{1}{3}$ and $\frac{2}{4}$ are unlike fractions. They have different denominators, 3 and 4.</p> <p>- Adding unlike fractions by making a systematic list of the multiples of the denominator and by drawing a model:</p> <p>1. Bottle A contained $\frac{1}{4}$ of milk. I'd poured $\frac{1}{6}$ of it into bottle B. How much milk was left in bottle A? $\frac{1}{4} - \frac{1}{6} = ?$ List the multiples of the denominators, 4 and 6. Multiples of 4: 4, 8, 12, 16, ... Multiples of 6: 6, 12, 18, 24, ... 12 is the lowest common multiple of 4 and 6.</p> <p>2. Bottle A contained $\frac{1}{4}$ of milk. I'd poured $\frac{1}{6}$ of it into bottle B. How much milk was left in bottle A? $\frac{1}{4} - \frac{1}{6} = ?$ List the multiples of the denominators, 4 and 6. Multiples of 4: 4, 8, 12, 16, ... Multiples of 6: 6, 12, 18, 24, ... 12 is the lowest common multiple of 4 and 6.</p> <p>$\frac{1}{4} = \frac{3}{12}$ $\frac{1}{6} = \frac{2}{12}$ $\frac{3}{12} - \frac{2}{12} = \frac{1}{12}$ $\frac{1}{12}$ of milk was left in bottle A.</p> <p>- Subtracting unlike fractions by making a systematic list of the multiples of the denominator and by drawing a model:</p>	<p>Fractions: TG6A Unit 4 p106</p> <p>- Four operations with fractions</p> <p>- Dividing by a proper fraction: dividing a whole number by a proper fraction, dividing a proper fraction by a proper fraction</p> <p>Farha cut a rectangular paper strip into a number of pieces. Each piece was $\frac{1}{2}$ of the paper strip. How many pieces did Farha cut the paper strip into? Number of pieces = $1 \div \frac{1}{2}$ $1 \div \frac{1}{2}$ means 'How many halves are there in 1 whole?' So $1 \div \frac{1}{2} = 2$</p> <p>The model above shows that there are 2 halves in 1 whole. So $1 \div \frac{1}{2} = 2$ Farha cut the rectangular paper strip into 2 pieces.</p> <p>- Word problems</p> <p>Ratio: TG6A Unit 5 p145</p> <p>- Ratio and fraction: write and express ratio by comparing and analyzing parts and wholes (values):</p> <p>1. Omar has 4 pencils. Milla has 12 pencils.</p> <p>Omar's pencils: 4 Milla's pencils: 12</p> <p>We can show the number of pencils both children have by using a model.</p> <p>Omar's pencils: 4 Milla's pencils: 12</p> <p>We can also arrange the model in another way.</p> <p>Omar's pencils: 4 Milla's pencils: 12</p> <p>The ratio of the number of Omar's pencils to the number of Milla's pencils is 4 : 12. The ratio of the number of Milla's pencils to the number of Omar's pencils is 12 : 4.</p>

Inspire Maths 1	Inspire Maths 2	Inspire Maths 3	Inspire Maths 4	Inspire Maths 5	Inspire Maths 6																																				
	<p>- Compare and order two or more fractions with different denominators using rectangular strips or model drawings of the same size.</p> <p>Mrs Hill has 3 cakes, all the same size. She cuts each cake into 8 equal parts. Jack eats $\frac{2}{8}$ of a cake, Tai eats $\frac{5}{8}$ of a cake and Miya eats $\frac{3}{8}$ of a cake.</p> <p>Who eats the most? Who eats the least?</p> <p>Jack $\frac{2}{8}$</p> <p>Tai $\frac{5}{8}$</p> <p>Miya $\frac{3}{8}$</p> <p>$\frac{5}{8}$ is greater than $\frac{3}{8}$. Tai eats more than Jack.</p> <p>$\frac{3}{8}$ is greater than $\frac{2}{8}$. Miya eats more than Tai.</p> <p>$\frac{5}{8}$ is smaller than $\frac{3}{8}$ and $\frac{2}{8}$. Jack eats less than Tai and Miya.</p> <p>Miya eats the most. Jack eats the least.</p> <p>- Adding and subtracting like fractions.</p> <p>- Solving word problems by recalling and applying 'part-whole' and 'adding on' concepts in addition of two fractions using model drawing. Recalling and applying 'part-whole' and 'taking away' concepts in subtraction of fractions using model drawing.</p> <p>Key vocabulary</p> <ul style="list-style-type: none"> - fractions: TG2B p56 - equal part: TG2B p56 - unequal: TG2B p56 - whole: TG2B p57 - fractional parts: TG2B p61 - fractions (one-half to one-twelfth): 	<p>- Comparing fractions using the equivalent fraction method:</p> <p>Ruby had $\frac{1}{2}$ of a pie.</p> <p>Peter had $\frac{3}{4}$ of an identical pie.</p> <p>Omar had $\frac{1}{4}$ of another identical pie.</p> <p>Peter had a bigger portion than Ruby. $\frac{3}{4}$ is greater than $\frac{1}{2}$.</p> <p>Omar had a smaller portion than Ruby. $\frac{1}{4}$ is smaller than $\frac{1}{2}$.</p> <p>- Adding related fractions (the related fractions are changed to like fractions first).</p> <p>- Subtracting related fractions (the related fractions are changed to like fractions first).</p> <p>Key vocabulary</p> <ul style="list-style-type: none"> - numerator: TG3B p116 - denominator: TG3B p116 - equivalent fraction: TG3B p117 - simplest form: TG3B p122 - portion: TG3B p123 - common denominator: TG3B p126 - common numerator: TG3B p127 - express: TG3B p129 	<p>- Conversion of fractions relating improper fractions to mixed numbers and converting between the two by separating an improper fraction into a whole and part of a whole, or by division, or by multiplication:</p> <p>Change $\frac{7}{4}$ to a mixed number.</p> <p>$\frac{7}{4}$ is an improper fraction.</p> <p>$\frac{7}{4} = 2 \text{ wholes} + 1 \text{ part}$</p> <p>$= 1 + \frac{3}{4}$</p> <p>$= 1\frac{3}{4}$</p> <p>- Adding and subtracting fractions: add two or three related fractions, subtract two related fractions, subtract a fraction from a whole number:</p> <p>Anno and Sarah have an apple each. Anno eats $\frac{1}{4}$ of her apple and Sarah eats $\frac{1}{4}$ of her apple. What fraction of apples do they eat altogether?</p> <p>Anno $\frac{1}{4}$</p> <p>Sarah $\frac{1}{4}$</p> <p>$\frac{1}{4} + \frac{1}{4} = \frac{2}{4} = \frac{1}{2}$</p> <p>They eat $\frac{1}{2}$ apples altogether.</p> <p>Find the sum of $\frac{1}{4}$ and $\frac{1}{4}$.</p> <p>$\frac{1}{4} + \frac{1}{4} = \frac{2}{4} = \frac{1}{2}$</p> <p>Always write mixed numbers and fraction answers in the simplest form.</p>	<p>- Fractions and division: a whole number when divided by another whole number can result in a whole number with or without a remainder, a proper fraction or a mixed number:</p> <p>2 identical pizzas are shared equally among 3 pupils. What fraction of a pizza will each pupil get?</p> <p>$2 \div 3 = \frac{2}{3}$</p> <p>Each pupil will get $\frac{2}{3}$ of a pizza.</p> <p>- Converting fractions to decimals: converting tenths, hundredths and thousandths, converting using long division, converting improper fractions and mixed numbers</p> <p>Express $\frac{1}{4}$ as a decimal.</p> <p>$\frac{1}{4} = \frac{25}{100} = 0.25$</p> <p>Express $\frac{3}{4}$ as a decimal.</p> <p>$\frac{3}{4} = \frac{75}{100} = 0.75$</p> <p>Express $\frac{1}{5}$ as a decimal.</p> <p>$\frac{1}{5} = \frac{20}{100} = 0.20$</p> <p>By converting $\frac{1}{5}$ to $\frac{20}{100}$ we can express the fraction as a decimal easily.</p> <p>- Adding mixed numbers with or without regrouping</p>	<p>- Comparing ratios:</p> <p>Mr Smith made five mixtures of orange and pineapple juice using different amounts of juice. He recorded them in a table.</p> <table border="1"> <thead> <tr> <th>Mixture</th> <th>A</th> <th>B</th> <th>C</th> <th>D</th> <th>E</th> </tr> </thead> <tbody> <tr> <td>Amount of orange juice (ml)</td> <td>300</td> <td>450</td> <td>600</td> <td>750</td> <td>900</td> </tr> <tr> <td>Amount of pineapple juice (ml)</td> <td>200</td> <td>300</td> <td>400</td> <td>500</td> <td>600</td> </tr> </tbody> </table> <p>Find the ratio of the amount of orange juice to the amount of pineapple juice in each mixture.</p> <table border="1"> <thead> <tr> <th>Mixture</th> <th>A</th> <th>B</th> <th>C</th> <th>D</th> <th>E</th> </tr> </thead> <tbody> <tr> <td>Amount of orange juice</td> <td>3:2</td> <td>3:2</td> <td>3:2</td> <td>3:2</td> <td>3:2</td> </tr> </tbody> </table> <p>What can you say about the ratios? We say that the ratio of the amount of orange juice used to the amount of pineapple juice used is the same in each mixture.</p> <p>We can also say that the amount of orange juice used and the amount of pineapple juice used are in a fixed ratio.</p> <p>- Word problems (2)</p> <p>Percentage: TG6A Unit 6 p197</p> <p>- Finding percentages: express a fraction or a decimal as a percentage and vice versa, analyze the parts and whole to express the percentage giving the number of parts:</p> <p>Let's recall.</p> <table border="1"> <thead> <tr> <th>As a Fraction</th> <th>As a Decimal</th> <th>As a Percentage</th> </tr> </thead> <tbody> <tr> <td>$\frac{34}{100}$</td> <td>0.34</td> <td>34%</td> </tr> </tbody> </table> <p>The big square is divided into 100 equal parts. 34 parts are shaded. The shaded parts can be expressed in the following ways:</p>	Mixture	A	B	C	D	E	Amount of orange juice (ml)	300	450	600	750	900	Amount of pineapple juice (ml)	200	300	400	500	600	Mixture	A	B	C	D	E	Amount of orange juice	3:2	3:2	3:2	3:2	3:2	As a Fraction	As a Decimal	As a Percentage	$\frac{34}{100}$	0.34	34%
Mixture	A	B	C	D	E

Problem-solving heuristics in Inspire Maths							
	Reception	Year One	Year Two	Year Three	Year Four	Year Five	Year Six
Acting it out							
Drawing a diagram							
Drawing a model							
Drawing a table							
Eliminating options							
Guessing and checking							
Looking for a pattern or relationship							
Making a list							
Using models to represent problems							
Restating the problem							
Simplifying the problem							
Solving in parts							
Solving part of the problem							
Using before-after concept							
Using a diagram							
Using a model							
Working back							

N.B. Green highlight indicates that a particular problem solving heuristic is taught in that year group

Problem-solving heuristics in Inspire Maths. (unit numbers are in brackets)

	Reception	Year One	Year Two	Year Three	Year Four	Year Five	Year Six
Problem solving heuristics	Act it out	Act it out (14, 10, 16)	Draw a diagram (14)	Draw a diagram (4, 15)	Act it out (7, 8, 12, 13, 14)	Act it out (7, 10, 14)	Act it out (2, 3, 10)
	Guess and check	Draw a model (14)	Guess and check (5, 8, 11, 15)	Drawing a model to represent a problem situation (8, 12, 14)	Draw a diagram (8, 11, 12)	Draw a diagram (13)	Draw a diagram (7, 10, 11)
	Solving part of the problem	Guess and check (2, 3, 7, 10, 17)	Making a systematic list (11)	Guess and check (1, 3, 6, 8, 14)	Draw a model (3, 8)	Draw a model (3, 4, 10)	Draw a model (10)
		Looking for patterns and relationships (1)	Work back (2, 5)	Looking for patterns (7)	Eliminating options (2)	Guess and check (1, 2, 3, 7, 8, 9)	Drawing a table (4, 5)
		Making a list (11, 18,19)		Making a list (14, 15)	Guess and check (8, 10)	Looking for a pattern (1, 2, 4, 5, 7, 14)	Guess and check (4)
		Simplifying the problem (17, 10, 17, 19)		Using models to represent problem situations (12, 14)	Looking for patterns (3, 13)	Make a systematic list (3, 6, 7, 8, 9, 14)	Make a list (5)
		Solving part of the problem (4)		Work backwards (15)	Making a systematic list (2, 12)	Restate the problem (2, 12)	Simplifying the problem (2, 6, 8)
		Using a diagram (3,9)			Simplify the problem (12)	Simplify the problem (11)	Solve in parts (1)
		Work backwards (6)			Use a diagram (3, 8, 12)	Use before-after concept (3)	Solve part of the problem (8)
					Work backwards (6)		Use before-after concept (5, 11)
						Work backwards (7)
